Master Tree List

Excerpts from the [Citywide Design Guidelines](#), Appendix D

Last Updated: November 14, 2019

Purpose

The Healdsburg Area falls within Sunset Zone 14. The zone is typified by hot summers and cold winters that are moderated by the influence of the marine air and fog penetrating the area through the Russian River Valley. Temperatures range from below freezing to over 100°F. The following trees are recommended for their hardiness and performance in this zone, and for their appearance, form and appropriateness in an urban environment. Note that the City's water efficient ordinance requires the consideration of water usage when identifying a planting plan ([see Appendix F in the Citywide Design Guidelines](#)).
